

## AT-FA-JP9911

### Jack Phone

- **No need Addressing**
- **The person on site with a mobile handset may just plug & talk to the control center**
- **Jack Diameter 6mm**

**AT-FA-JP9911** is a telephone jack socket, normally located at various places. Common installation positioning is in the landing levels of all core stairwells and escape routes, although the exact positioning is the responsibility of the project designer.

The person on site with a mobile handset may just plug & talk to the control center. The unit should be mounted in a suitable and dry location at about 1.5m from finished floor level

### Installation

Structure schematic is shown as Fig.1 and Fig.2. The jack socket can be installed with standard electronic back box, which the mounting hole distance is 60mm.

Connect the cable to the terminals. There is no need addressing.
